

AlphaWallet

The Web 3.0 browser

AlphaWallet

The Web 3.0 browser

Context

Blockchain is ushering in a new era of decentralised applications and businesses, connecting users directly with service providers while cutting out the middle man

Adoption of crypto-currency & tokens is increasing, with the early adopters of the technology building, testing and validating uses cases to identify the most meaningful applications

Many industries are ripe for disruption as the ecosystems evolved around centralised businesses with the number of intermediaries facilitating transactions for consumers

What is Alphawallet?

AlphaWallet is a digital platform for enabling seamless user experiences for distributed applications

create

store

transact

interact

Our Philosophy

The key utility of blockchain is tokenisation

Tokens can represent rights and facilitate execution of the rights

access

identity

own

owe

option

However, using distributed applications today is not a great experience

fragmented

complicated

scalability

What is TokenScript?

TokenScript is front end for tokens, analogous to what HTML was for Web 1.0

trust

interoperability

privacy

security

Tokenise, decentralise, distribute & engage

access

identity

own

owe

option

Tokenise, decentralise, distribute & engage

trust

interoperability

privacy

security

Our major implementations so far...

Official FIFA tickets on
Ethereum

Qoin, a 10 year old,
\$600m B2B marketplace
that adopted blockchain

Official UEFA 2020 tickets

Official Ethereum EDCON
tickets partner

Some of the tokens we created.....

car ownership token

smart door key token

property token

DeFI/DAO payment tokens

Our partners...

Thank You!!

The Art of Possible: Property on TokenScript

TokenScript is a programming language, and a framework, to create native 'Token User Interfaces' in crypto wallets, helping token users intuitively navigate and interact with Web3.0

The diagram illustrates the integration of Property Tokens and TokenScript into a custom wallet interface. On the left, a yellow coin with a blue square logo represents 'Property Tokens', and an orange folder icon with '{TS}' and a person icon represents 'TokenScript'. An equals sign follows. To the right, three smartphone screens show the resulting interface:

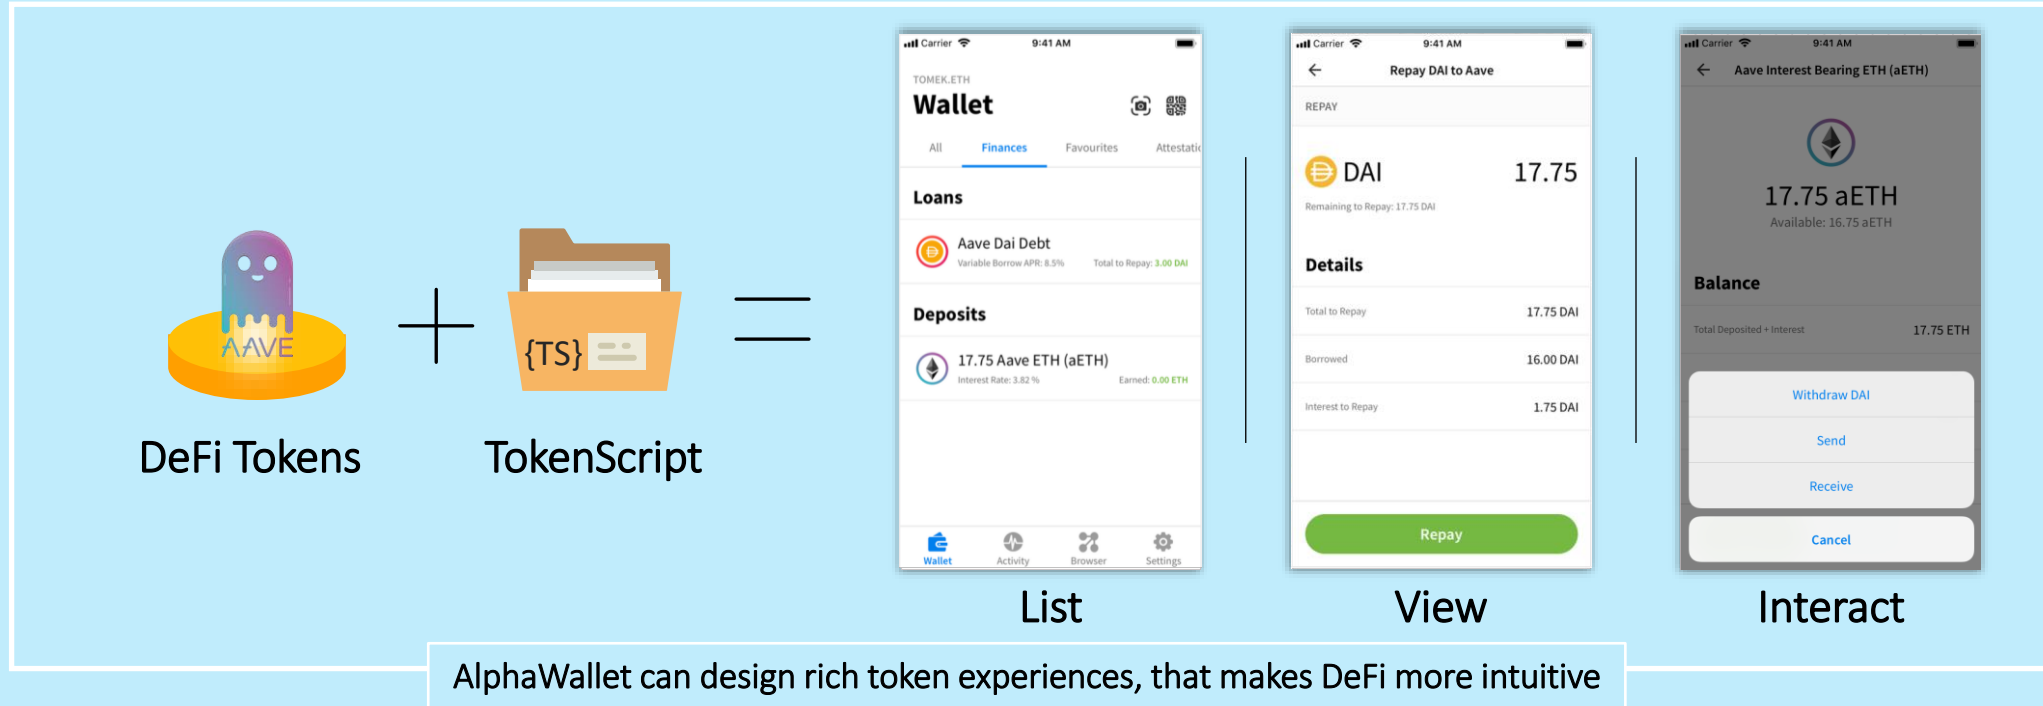

- List:** A wallet screen titled 'TOMEK.ETH Wallet' showing '1.503 Ethereum (ETH)' and 'Simple Property Tokens (UPT)'.
- View:** A 'Property Tokens' screen listing three properties: 'Blanknese' (1,200 EUR, Commercial, Hamburg), 'Blanknese' (4,200 EUR, Residential, Hamburg), and 'Blanknese' (7,200 EUR, Commercial, Dubai).
- Manage:** A 'Manage Property' screen for a 1,200 EUR investment in Hamburg, showing a 9.4% PA yield and an 'Invest' button.

AlphaWallet can design rich token experiences and even build a customised wallet for property token users.

 AlphaWallet is an open-sourced crypto wallet that natively supports **TokenScript**. Our partners often fork AlphaWallet to create custom branded wallet for their users and tokens.

The Art of Possible: DeFi (Decentralised Finance) & TokenScript

TokenScript is a programming language, and a framework, to create native 'Token User Interfaces' in crypto wallets. TokenScript can make DeFi more intuitive

 **AlphaWallet** is an open-sourced crypto wallet that natively supports **TokenScript**. Our partners use **TokenScript** to enhance their DeFi experiences for their users.
